ABSTRACTED-PUB-NO: WO 9856993A

BASIC-ABSTRACT: A synthetic turf pile carpet has closely spaced U-shaped tufts

(11) fastened upon a backing sheet, preferably made from woven weather resistant polypropylene or nylon fibres. A binder layer (16) of

polyurethane
adhesive may be applied to bind the tufts and backing sheet
together. The
carpet may be placed upon a resilient cushion underpad (18) of
open-cell,
expanded bead polypropylene, from 1/4'' to 12'' thick, depending
upon the
application.

The upper portions of the tufts are sand blasted to shred the
ends into slivers
which entwine to form a dense mat, which may be further treated
with a high
pressure water spray. Slits (30) may be provided to receive golf
tees.

USE - To simulate a natural grass playing field for games such as
golf or
tennis (claimed).

ADVANTAGE - Closely simulates the feel, action and reaction of a
natural grass
playing field.

ABSTRACT:

A synthetic turf surface for golf courses, tennis courts and other grass-surfaced game playing fields is formed of a synthetic grass carpet having a flexible base sheet (14) with closely spaced-apart upright, blade-like strands (12) of plastic material forming a dense grass-like surface. The carpet is supported upon a cushioning underpad (18) which is formed of a thick, molded sheet of open cell, expanded bead polypropylene. The resiliently compressible polypropylene underpad combined with the synthetic grass carpet closely simulates the feel of a natural grass covered playing surface.

ABSTRACTED-PUB-NO: WO 9856992A

BASIC-ABSTRACT: Disclosed is a method of forming a synthetic turf game surface comprising a carpet cover having a base sheet (14) carrying closely spaced, upright plastic strands (12) simulating grass blades. A polyurethane adhesive binding layer (16) may be applied to secure the blades in place.

The cover is placed on a resilient cushion pad (18) supported on a firm surface, and the upper portions of the strands (12) are sand blasted to shred them into slivers (23) which intertwine to form a dense mat, while the lower portions remain generally upright, followed by spraying with a pressurised water jet. The cushion pad (18) is formed from moulded, open cell, expanded bead polypropylene of a density of from 1.3 to 2.8 lbs per cu.ft. and a thickness between 1/2" to 2", giving a pad density of about 1.3 to 3 lbs per cu.ft. suitable for playing golf. A thinner pad, 1/2" to 1" thick, is used to form a simulated grass tennis court.

USE - To form a simulated turf game playing surface.

ADVANTAGE - Closely simulates the feel and playing characteristics of natural grass turf.
